ABOUT ME

Innovative Full Stack Developer specializing in scalable real-time systems with the MERN stack. Developed Learning Management System incorporating live class streaming, WebSocket messaging, and Redis for event-driven architecture. Expertise in system design, asynchronous processing, and performance-oriented backend services.

SKILLS

- **MERN Stack Development**
- **Event Driven Architecture**
- **RESTful API Design**
- **WebSocket & Real-Time Systems**
- **Redis (Pub/Sub, Streams & Message Queues)**
- **JWT Authentication & Security**
- **Database optimization**
- **Cloud media integration**

EDUCATION

BE.Electronics and Communication Engineering

Bannariamman Institute of Technology

2023 - 2027

EXPERIENCE

Learning Management System, Personal Project

- Designed and developed a scalable Learning Management System (LMS) using PERN stack (Postgress, Express, React, Node.js).
- Implemented real-time live class streaming using Mediasoup and Socket.IO for low-latency communication.
- Built real-time messaging system with WebSockets for instant student–instructor communication.
- Architected event-driven live session handling using Redis Pub/Sub and Redis Streams.
- Designed and implemented a coupon and discount system with validation logic, expiry handling, and usage constraints to support promotional campaigns.
- Developed instructor dashboard with course management, and course analytics.
- Designed system with separation of concerns, modular architecture, and scalable backend patterns.
